MANUFACTURER OF THE ONLY AUTHENTIC MODEL "A" MUFFLERS SINCE 1983

Phone: (650) 279-6609

## Station Wagon Tail Pipe Extension (can be used on any Model A)

The photo at right shows the view looking to the rear. Notice the tail pipe extension going from the muffler to above the rear axle.

The right spring clamp bar is removed and replaced by the special station wagon version (red arrow). This allows a threaded rod to be used to support the tail pipe at this point. Some adjustment is possible.

Always leave at least 1" of rod showing, otherwise the pipe will be too close to the floor of the body.

Photo at left is looking from the rear. Note the pipe crosses over and is supported at the frame, just like the stock muffler. The tail pipe is clamped to the rear of the muffler. We provide a short stub on the back of the muffler for this connection.

Note: the pipe in the photos was a prototype and thus some areas are not painted. Our production pipes are all mandrill bent sections, welded together and painted with high temperature paint.

We obtained drawings of the tail pipe from the Ford Archives and also found a fellow with an original tail pipe (rusty), we used these two items to create the reproduction tail pipe. It is almost identical to the sample we had and after some minor adjustments, it will fit any Model A, not just the Station Wagon and Delivery vans.
